

Electricity contracts

To get electricity in your home, you need two contracts – one for the electricity network and one for the electricity supply.

Electricity network

You sign the electricity network agreement with the company that owns the electricity network in the area of your home. This contract is not optional – you must have one. Tekniska verken owns the electricity networks in Linköping, Katrineholm and Mjölby. Please contact us to sign the electricity network contract.

Electricity supply

You also need a contract for your electricity supply. This contract handles the volume of electricity you use in your residence. When you enter into an electricity network contract with us, you are automatically allocated to our electricity supply company Bixia, which gives you 100 percent renewable electricity.

Note that when setting up an electricity supply contract, you need to choose which price model you prefer. Otherwise, you will be charged a higher price for your electricity (under what is known as a “designated contract”).

Agreements:

Bixia Framtid (Bixia Future)

Combines small risk with great security. With Bixia Framtid you get fewer price peaks so that you avoid the biggest fluctuations in the electricity market. This is a permanent agreement with a 12-month notice period.

Rörligt elpris (variable price)

This means that the price changes during the year. Electricity is usually more expensive in winter than in summer. This is an agreement with no binding period, and you can change the form of contract whenever you want.

We at Tekniska verken and Bixia are happy to help you set up a favorable electricity supply contract. For assistance and enquiries, e-mail us at kundservice@tekniskaverken.se or give us a call on +46 (0) 771-25 26 27. Please have your apartment no. nearby when giving us a call.
